

## Lap Band Was Successful

### Lap Band Was Successful

In being asked Why Lap Band Worked for her, Tasha notes that she only had pain for two days after the lap band procedure and after that she was up and running.

Tasha so found the lap band experience to be a positive one that she soon after handed out a number of cards following her experience, even to strangers.

For Tasha, Why Lap Band Worked was a good amount of research on her part, finding the right lap band specialist, and keeping a positive attitude throughout it all.
